

Creating a User Group policy.

The application has built-in permission system which was based on ACL architecture, so you can set permission for role (group) or given user to separated modules.

After having groups, you can create new user for each group. In order to create new user, you go to manage users (User/User in back-end), here you can create, edit, delete or active for any user. User will have default permission according the group that it belong to (thus one user can't belong to many groups). However you can still set special permission for individual user in a group from our User Management Modules.

Creating a new User Group policies :

Login to *Admin => User => New Group policy* to create a new user group. You may see the field called "**Register through**" that means, you are pointing a particular dynamic web form through which all members under the creating group's users will be registered. See the picture below :

The screenshot displays the 'Role' management page. At the top, there is a navigation menu with options: HOME, USERS, SITE, CONTENT, MENU, MODULES, SETUP, UTILITY, HELP. A 'Get Helped' button is visible in the top right corner. Below the navigation, there is a 'Role' header with a user icon. A message states: 'The groups are listed as follows. You can NOT remove a group when it remain locked or has at least one user.' Below this is a 'Quick Search' field. The main content is a table with the following columns: Name, Description, Table registered through below forms, Lock Status, Id, Num. Of Users, and Action. The table lists several roles: Developer, Administrator, Manager, Member, Landlord, and Tenant. Below the table is a form to create a new role, with fields for Name, Description, Register through (a dropdown menu), and a checkbox for 'Lock this group'. A 'Create' button is at the bottom of the form.

Name	Description	Table registered through below forms	Lock Status	Id	Num. Of Users	Action
Developer	Developer	Select.....	Locked	100	1	Permission
Administrator	Administrator	Select.....	Locked	101	1	Permission
Manager	Administrator with limited access to manage registered user[s]	Select.....	Locked	102	1	Permission
Member	Member	Member Registration	-	103	0	Remove Permission
Landlord	Landlord	Member Registration	-	104	0	Remove Permission
Tenant	Tenant	Member Registration	-	105	0	Remove Permission

Locking a Group:

Please note that, when you lock a user group means belonging group's member can't edit / reset the permission setting in future.

Set permission:

You can set or managed permission going to *Admin -> Setup -> User Role Manager -> Permission* location.
